

1. Drill the hole on the wall referring to the wall mounting bracket hole position, hole diameter of  $\phi 6\text{mm}$ , position the four  $\phi 6\text{mm}$  plastic expansion screws in the drilled hole.

2. Use four M4 $\times$ 30mm self-tapping screws to mount the wall-mount bracket on the wall.

3. Fix the lower cover of the bracket to the base of the camera with imperial screws (size 1/4-20UNC $\times$ 3/8).  
Note: A layer of the silicone shock-absorbing pad should be positioned between the camera base and the bracket. (It is included in the package.)
